

### In Brief

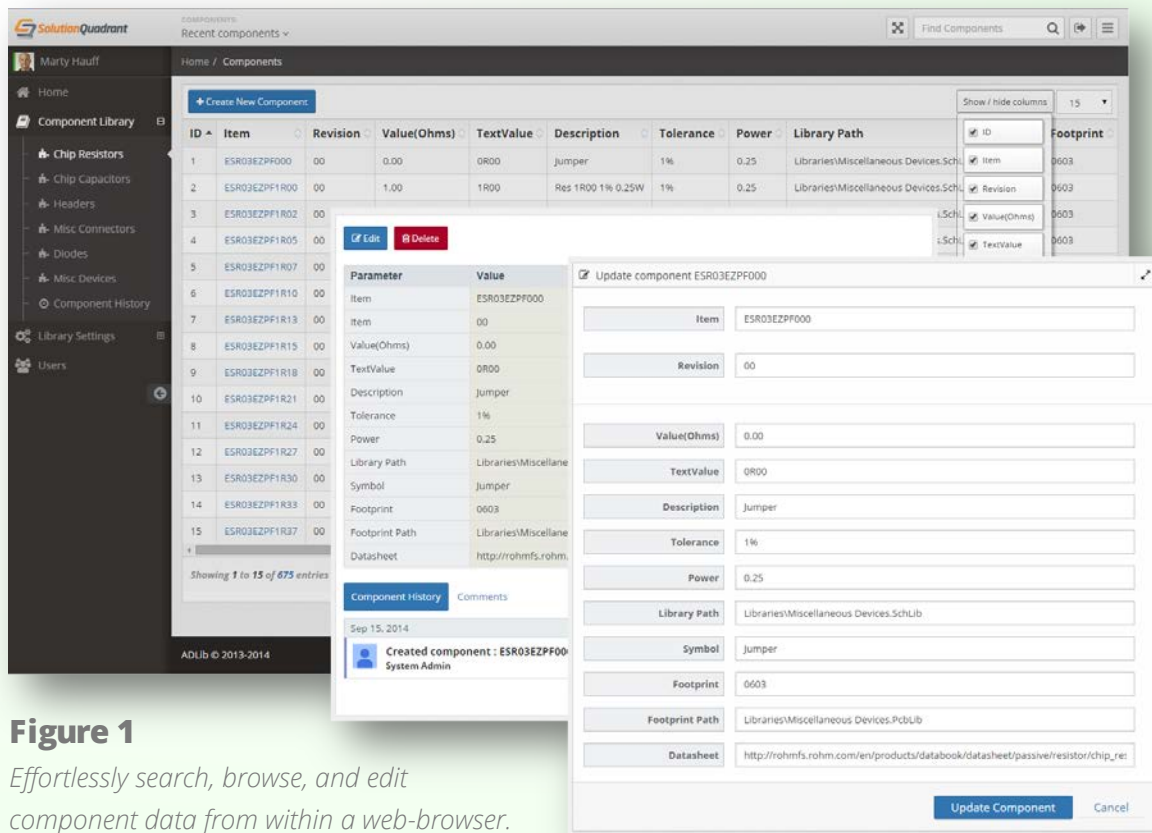

ADLib solves the challenge of setting up and administering centralized Database Libraries with Altium Designer

Database Libraries are directly accessible from Altium Designer's familiar Library panel and continue to be the lightest way to centrally store and manage component data

Use a web browser to edit and manage component libraries without a database administrator and without consuming an Altium Designer license

ADLib lets you get back to designing faster

Utilizing the latest in web-based software technologies and techniques, ADLib takes the pain out of setting up and administering database libraries in Altium Designer, and brings all the benefits of centralized administration and management of corporate design libraries into easy reach.

**Figure 1**

*Effortlessly search, browse, and edit component data from within a web-browser.*

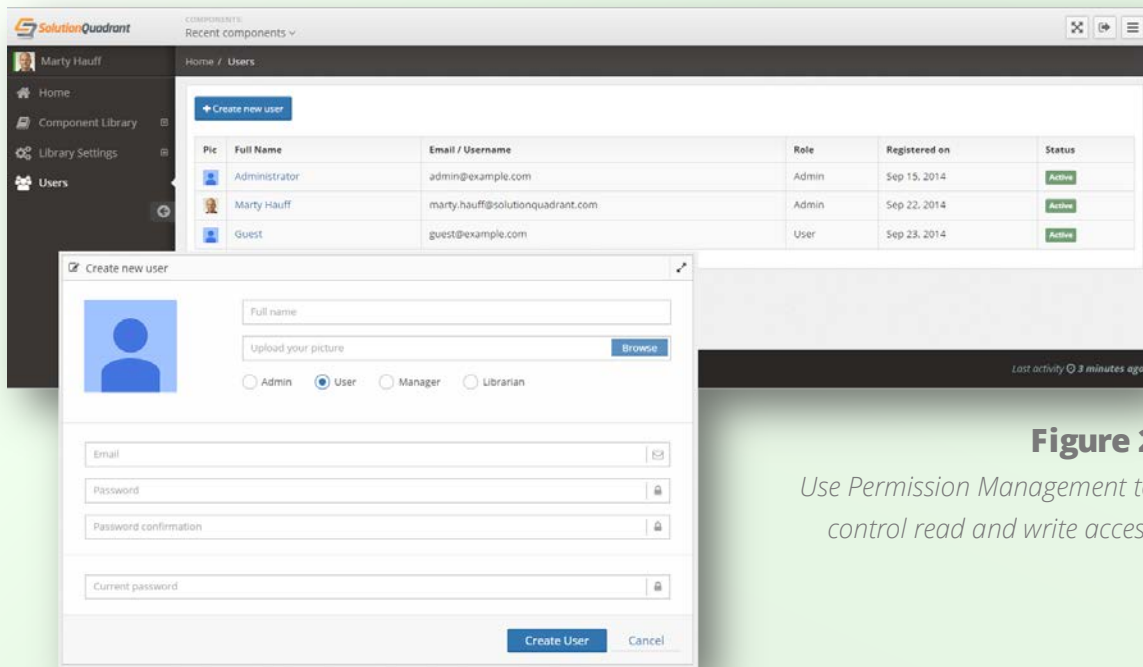

From a single, browser-based GUI:

- effortlessly add new components,
- edit existing ones,
- create new component categories, and
- edit parameter values.

You can even add or delete parameter fields from a component category without ever needing to rebuild the underlying table structure; it's all seamlessly managed for you.

## Key Benefits

- Effortless deploy a centralized database library within minutes
- Included permission management controls access to component data
- Extensive history tracking provides a complete audit path of changes
- Easily configurable with virtually limitless support for user defined component categories and parameters
- Flexible data structures allow parameters to be seamlessly added or removed from individual component categories (tables)
- Accessible from any web browser so library management activities don't consume an Altium Designer license.
- Scalable architecture can be readily extended with SVN and PLM integration plugins

**Figure 2**

*Use Permission Management to control read and write access*

## In Detail

ADLib encapsulates a MySQL Database and web server into a self-contained software appliance.

ADLib can be installed as a virtual machine on virtually any platform - Linux, OS X or Windows - either locally, inside your LAN, or even on the Web.

## Want Subversion with that?

ADLib+ adds an SVN server to deliver a complete history of library changes as well as a turnkey repository solution for all your design sources.

## What about your design files?

CADmium builds further on ADLib's core technologies by providing sophisticated workflow management, permissions control and PDM/PLM/ERP integration.

We help you manage your data in your way!
